DESIGN LINE* Telephones

DESIGN LINE* telephones are the way in which Western Electric meets the needs of customers who want "a little something extra" in their telephones. These stylish telephones are available in a wide variety of shapes, sizes, and colors. Whether it be antique or contemporary, any decor will be enhanced by the addition of a DESIGN LINE* telephone.

ANTIQUÉ GOLD* Cradlephone

ANTIQUE GOLD* Cradlephone

A natural eye-catcher, fit for royalty, the ANTIQUE GOLD* phone will complete the elegant atmosphere of French Provincial or other fine period furnishings. Ornate gold-colored figures adorn the entire phone, even the rotary dial.

ANTIQUE GOLD* Cradlephone

Single Line Telephones

The following pages provide information on single line telephones. Although generally used in the home, these telephones are not limited to residential use. A photo, brief description, chart and information page are included for each telephone. The chart provides a listing of all the models that are available for each telephone. The features and options of these models are also indicated on the chart. The information page can supply such things as code numbers, color availability, dimensions, and manufacturing locations. Whatever the home communication need, Western Electric can fill it.

Traditional Wall Telephone

The compact wall-mounted telephone features TOUCH-TONE® or rotary dialing and an adjustable ringer volume. It is also available in a two-line model.

NOTES:

1. A three digit code number indicates rotary dialing or no dial; four digit code number indicates Touch-Tone® dialing
2. Activation of factory-installed exclusion feature requires installation of D-180810 kit of parts.
3. Provided with a removable plug adjacent to dial to accommodate a visual signal lamp. The lamp may be installed in the field using a D-179968 kit of parts for an incandescent lamp using key system power for line status indication, or a D-179969 kit of parts for a neon lamp for visual ringing indication.
4. Factory wired for two-wire service. Arranged for four-wire service as a field option.
5. Requires field wiring modification.

TRIMLINE[®] Telephone

The sleek TRIMLINE[®] telephone is available with either TOUCH-TONE⁺ or rotary dialing. Both types of dials are situated in the hand set and are illuminated by energy-saving, light-emitting diodes (LEDs). The diodes glow from power supplied through the telephone lines, thus eliminating the need for a transformer and associated wiring at the customer's premise. The recall button below the dial permits consecutive calls without returning the hand set to the telephone base. The TRIMLINE[®] telephone is available in both a desk model and a wall model.

PRINCESS® Telephone

The PRINCESS® telephone is available with either TOUCH-TONE† or rotary dialing. It is equipped with a lamp assembly for dial illumination. The lamp can be operated for use as a night light by means of a slide switch located at the rear of the telephone. The light brightens when the hand set is lifted. The PRINCESS® telephone is also available in a two-line model.

Intercom Only Telephone (2575AM and 575AM)

These telephone sets are six-button key sets which are arranged for INTERCOM SERVICE ONLY. Each is equipped with a loudspeaker for tone and voice signaling. A volume control is provided to control the level of the signal. The first button is a red, nonfunctional button (blocked nonoperative), which may be illuminated for use as a message waiting indicator. The second, third, and fourth buttons are illuminated pickup buttons. The fifth and sixth buttons are not illuminated and are blocked nonoperative. The intercom pickup buttons on the telephone sets do not automatically restore to the nonoperated position when the hand set is placed on-hook. All telephone sets are available only in ivory.

The AUTOMATIC TELEPHONE*

The AUTOMATIC TELEPHONE* is a versatile and reliable solid state instrument which automatically answers an incoming call. It gives the caller a personalized announcement and records the caller's message of any length. This product provides many outstanding features. It holds 20 minutes of incoming calls, plus has application flexibility (message recording, answering and call forwarding). It also has a remote feature, which gives the caller the capability of retrieving recorded messages by using any remote telephone. It is a black machine with a wood grain trim and brushed aluminum faceplate.

TOUCH-A-MATIC® S Series Telephone

The set contains a battery powered 12 number repertory dialer. Recording, adding or changing numbers in the telephone's dialer is simple and can even be done during a telephone conversation without any interference or interruption on the call. The unit provides an automatic weak battery indication to let the user know when the battery needs replacement. The S Series Telephone has two illuminated buttons on the dialer, one red and one green. When the receiver is lifted, these buttons will light for 10 seconds to aid in quick identification of very important numbers. (This telephone is composed of solid state components that provide instant, reliable communication. An electret microphone in the handset enhances transmission fidelity and the electronically switched dialer offers added convenience in speedy repeat dialing of the programmed numbers with the touch of a single button.) It is available in wall or desktop models and comes in six decorator colors. TOUCH-TONE† dialing only.

TOUCH-A-MATIC® 16 Telephone

This is a single line telephone set which can record, store, and automatically dial up to 15 telephone numbers. It also has a "last number dialed" button, along with its own directory-at-a-glance. Calling is accomplished by lifting the hand set and pushing the button beside the name on the directory sheet. This telephone is available with either TOUCH-TONE[†] or rotary dialing. It can also be wall mounted. All sets come in ivory. The corresponding faceplate is available in a choice of two woodgrains or seven decorator colors.

TOUCH-A-MATIC® 32 Telephone

This time-saving telephone can record, store, and automatically dial up to 31 telephone numbers. It also has a "last number dialed" button, along with its own directory-at-a-glance. Calling is accomplished by lifting the hand set and pushing the button beside the name on face card. This telephone comes in a single line or six-button model, and it is available with either TOUCH-TONE[†] or rotary dialing. Colors include black, green, white, and light beige. The corresponding faceplate is available in matte aluminum, teak, or walnut. Options include one-touch calling and speaker-phone use.

TOUCH-A-MATIC® 32 Adjunct Dialer

This adjunct dial has most of the features of the standard TOUCH-A-MATIC® 32 telephone set, except it has no hand set, ringers or line switch. The dial can be connected to COM KEY® systems, Multi-Button Electronic Telephone (MET) sets, and large capacity key telephone sets. It can also be used with the standard TOUCH-A-MATIC® 32 telephone set to provide an expanded memory. The adjunct dial comes in black, ivory, green, white or light beige. The corresponding faceplate is available in matte aluminum, teak or walnut.

Multiline Telephones

The following pages feature telephones that offer more than one line. The section begins with two-line sets, and ends with a telephone that offers as many as thirty buttons. All of these telephones are suitable for business use, and several sets may also be used in the home. A photo, brief description, chart and information page are included for each telephone. The chart provides a listing of all the models that are available for each telephone. The features and options of these models are also indicated on this chart. The information page can supply such things as code numbers, color availability, dimensions, and manufacturing locations. When one line is not enough, a multiline telephone is the answer.

Two-Line Traditional Wall Telephone

Two-line telephones are available in traditional wall, traditional desk, PRINCESS® telephone, panel, and Card Dialer styles. The telephones are equipped with a turn key and plunger switch which allows either line to be selected or placed on hold.

Six-Button TOUCH-A-MATIC® 32 Telephone

This time-saving telephone can record, store, and automatically dial up to 31 telephone numbers. It also has a "last number dialed" button, along with its own directory-at-a-glance. Calling is accomplished by lifting the hand set and pushing the button beside the name on face card. This six-button model is available with either TOUCH-TONE[†] or rotary dialing. Colors include black, green, white and light beige. The corresponding faceplate is available in matte aluminum, teak, or walnut. Options include one-touch calling and speakerphone use.

Multibutton Electronic Telephone (MET) Sets

Multibutton Electronic Telephone (MET) Sets were initially designed for use with the DIMENSION® PBX Electronic Custom Telephone Service and the HORIZON® Communication System. The MET sets feature modular hand sets and mounting cords, and decorator options provided by snap-in faceplates, which are available in seven colors and two woodgrain finishes. All sets have TOUCH-TONE† dialing, a tone ringer situated below the hand set, a ringer volume control switch on the left side of the set, and a recall button located below and to the left of the dial. Each set contains one or more vertical line/feature keys positioned to the right of the dial. These keys, which are available in 5-button and 10-button units, can be arranged to provide for 5-, 10-, 20-, 30-, and 40-button sets. All telephone sets are available in ivory only.

COM KEY® 416 Telephones

These multibutton telephone sets are used with the 4A Communication System (COM KEY® 416 system). COM KEY® 416 system will accommodate a maximum of four Central Office/Private Branch Exchange (CO/PBX) lines and 16 stations. The system offers such basic features as pickup, hold and illumination, recall, voice and tone ringing, multiline conferencing, automatic button restoration, built-in loudspeaker, volume control voice and ringer, and outgoing service during power failure. Options include personal line, TOUCH-TONE[†] dialing, privacy (lockout), privacy release, station restriction, music-on-hold, tone-on-hold, supplementary alerting, paging, preset intercom signaling, code busy DSS key, power failure ringing, hands-free answering on intercom, (speakerphone), repertory dialing, external ringing. The 4A System includes five types of telephones:

- 1) Primary Sets
- 2) Basic Satellite Desk Sets
- 3) Basic Satellite Wall Sets
- 4) Satellite Sets with Built-In Speakerphone (BIS)
- 5) Satellite Sets with Hands-Free Answering on Intercom (HFAI)
- 6) Headset
- 7) Special G-type Handset Conversion

Each primary set contains the control circuitry for two CO/PBX lines and one intercom path. It also contains the power circuitry to serve itself and some combination of up to seven satellite sets. The addition of a second primary set doubles the capacity of the system; up to seven more satellite sets can be connected, with each station in the system now served by up to 4 CO/PBX lines and two intercom paths. The satellite sets provide the same basic services as the primary sets, but they do not contain control and power circuits.

Because the control and power circuitry of the 4A System is contained in the primary station sets, there is no need for separately-mounted key service units which most other key systems require. The only equipment required in addition to the telephone sets are interconnecting cables, connecting blocks (91B),

*Registered Trademark of AT&T Co.

†Registered Service Mark of AT&T Co.

COM KEY® 416 Telephones

adapters, and small, externally mounted units for some of the optional features.

Each 4A station can be programmed by the customer to ring on any combination of the common CO/PBX lines. All stations have access to all common lines in the system. Therefore, any set can be assigned as the attendant station, if one is required. Each station also has direct access to the ten intercom codes. All 4A System telephone sets are available with either TOUCH-TONE® or rotary dialing. The primary set is available only in a desk model, but the basic satellite sets can be ordered in both desk and wall models. The BIS and HFAI sets can be converted from desk to wall mounting by means of a kit of parts. The COM KEY® 416 system telephones are available only in ivory. The corresponding faceplates are available in seven decorator colors and two woodgrain finishes.

COM KEY[®] 416 Telephones

COM KEY[®] 416 Telephones

Primary Sets—Order one for a system with one or two CO/PBX lines and one intercom path; order two for a system with three or four CO/PBX lines and two intercom paths.

COM KEY[®] System Options

No. 109A Loud-Speaker Set

Consists of a loud-speaker and amplifier board mounted in a wooden enclosure.

Equipped with individual volume controls for the voice and music potentiometers and a No. 85A connector block and a D8W-50 cord for interconnection.

Designed for indoor installation as a wall-mounted loud-speaker for the COM KEY[®] 416 system, to provide voice paging in a typical business office without high noise environments. The loudspeaker effective range is approximately 30 feet.

For background music, the use of a 33C voice coupler is required to interface with the customer music source.

For additional information, refer to BSP 518-450-106.
Initial use: COM KEY[®] 416 system.

COM KEY[®] System Options

No. 24B Apparatus Unit

Power failure ringer adjunct for the COM KEY[®] 416 system. Unit contains both male and female 50-pin telephone-type connectors for connection anywhere in the COM KEY[®] 416 system.

Also contains two C4A ringers and associated circuitry to connect those ringers to the telephone lines in the event AC power to the COM KEY[®] system primary set (No. 981A01 and 2981A01 telephone sets) is disrupted.

Two No. 24B apparatus units are required to provide power failure ringer service to all four telephone lines of 4A installation where two primary sets are used.

Overall dimensions are 7.469 inches long by 6.906 inches wide by 3.396 inches high.

Initial use: COM KEY[®] 416 system.

No. 25A Apparatus Unit

A supplementary alerting device adjunct for the No. 4A communication system (COM KEY[®] 416 system).

Contains both male and female 50-pin telephone-type connectors for connection of the unit anywhere in the system cabling.

Also contains associated circuitry to accept an input from any one DSS zone and/or any combination of the four common audible leads and provides an output capable of driving a KS-16626 L12 relay set per BSP 463-120-100 or a KS-16301 L17 relay per BSP 463-110-100. The contacts of these relays control auxiliary signals operating on a separate power supply circuit.

Overall dimensions are 5.760 inches long by 3.930 inches wide by 2.135 inches high.

Initial use: COM KEY[®] 416 system.
